W 10-16 E2E OpenAI/Google Large Scale RL on Hardware
Grace Eysenbach, Maggie Wang, Michael Emanuel, Nao Ouyang
Grade: 4.76 (students) 5 (staff) 4.88 (total)
Comments (positive):
- Really strong intro that really gave more than sufficient background and great time management.
- Very nice related work summarization.
- The idea of showing future work through real research at the end was also really great.

Comments (constructive criticism):
- The google paper section felt less researched and prepared than the OpenAI paper section. This could have also just been due to how strong the OpenAI section was.
- The future work section seemed very disorganized and less prepared than the rest of the presentation. There should be more practice done in the future.
